

ABSTRACT OF THE DISCLOSURE

A guidance output method is adapted to an electronic apparatus having a guidance part which indicates guidance information including operation  
5 procedures and warnings related to maintenance. The guidance part is provided at a location corresponding to an apparatus part, within the electronic apparatus, to which the guidance information is related. The guidance output method displays, in response to a display  
10 instruction, guidance information indicated by a corresponding guidance part, on a display part of the electronic apparatus.
